

# TABLE OF CONTENTS

Preface	xi
Preface (2nd Edition)	xiii
<b>INTRODUCTION. RHEOLOGY: SUBJECT AND GOALS</b>	<b>1</b>
<i>Literature</i>	6
<b>1 CONTINUUM MECHANICS AS A FOUNDATION OF RHEOLOGY</b>	<b>9</b>
1.1 Stresses	9
1.1.1 General theory	9
1.1.2 Law of equality of conjugated stresses	12
1.1.3 Principal stresses	12
1.1.4 Invariants of a stress tensor	14
1.1.5 Hydrostatic pressure – spherical tensor and deviator	16
1.1.6 Equilibrium (balance) equations	19
1.2 Deformations	21
1.2.1 Deformations and displacements	21
1.2.1.1 Deformations	21
1.2.1.2 Displacements	24
1.2.2 Infinitesimal deformations: principal values and invariants	26
1.2.3 Large (finite) deformations	27
1.2.4 Special cases of deformations – uniaxial elongation and simple shear	30
1.2.4.1 Uniaxial elongation and Poisson's ratio	30
1.2.4.2 Simple shear and pure shear	31
1.3 Kinematics of deformations	34
1.3.1 Rates of deformation and vorticity	34
1.3.2 Deformation rates when deformations are large	35
1.4 Summary – continuum mechanics in rheology	36
1.4.1 General principles	36
1.4.2 Objects of continuum as tensors	37
<i>References</i>	39
<i>Questions for Chapter 1</i>	40
<b>2 VISCOELASTICITY</b>	<b>43</b>
2.1 Basic experiments	43
2.1.1 Creep (retarded deformation)	43
2.1.2 Relaxation	44
2.1.3 Fading memory	46

2.2	Relaxation and creep – spectral representation. Dynamic functions	47
2.2.1	Retardation and relaxation spectra – definitions	47
2.2.2	Dynamic functions	50
2.3	Model interpretations	55
2.3.1	Basic mechanical models	55
2.3.2	Complicated mechanical models – differential rheological equations	59
2.3.3	Non-mechanical models	60
2.4	Superposition – The Boltzmann-Volterra principle	61
2.4.1	Integral formulation of the superposition principle	61
2.4.2	Superposition principle expressed via spectra	64
2.4.3	Simple transient modes of deformation	65
2.4.3.1	Relaxation after sudden deformation	65
2.4.3.2	Developing stresses at constant shear rate	65
2.4.3.3	Relaxation after steady shear flow	66
2.4.3.4	Relationship between relaxation and creep functions	66
2.4.3.5	Relaxation function and large deformations	67
2.5	Relationships among viscoelastic functions	69
2.5.1	Dynamic functions - relaxation, creep, and spectra	69
2.5.2	Constants and viscoelastic functions	71
2.5.3	Calculation of a relaxation spectrum	73
2.5.3.1	Introduction - general concept	73
2.5.3.2	Kernel approximation - finding a continuous spectrum	75
2.5.3.3	Computer-aided methods for a discrete spectrum	76
2.6	Viscoelasticity and molecular models	78
2.6.1	Molecular movements of an individual chain	78
2.6.1.1	A spring-and-bead model (“free draining chain”)	78
2.6.1.2	Model of a non-draining coil	81
2.6.1.3	Model of a rotating coil	82
2.6.2	Relaxation properties of concentrated polymer solutions and melts	82
2.6.2.1	Concept of entanglements	82
2.6.2.2	Two-part distribution of friction coefficient	83
2.6.2.3	Non-equivalent friction along a chain	83
2.6.2.4	Viscoelastic entanglements	84
2.6.2.5	Rubber-like network	84
2.6.2.6	“Tube” (reptation) model	85
2.6.2.7	Some conclusions	86
2.6.3	Viscoelasticity of polydisperse polymers	87
2.7	Time-temperature superposition. Reduced (“master”) viscoelastic curves	91
2.7.1	Superposition of experimental curves	91
2.7.2	Master curves and relaxation states	96
2.7.3	“Universal” relaxation spectra	98
2.8	Non-linear effects in viscoelasticity	99
2.8.1	Experimental evidences	99
2.8.1.1	Non-Newtonian viscosity	99

2.8.1.2 Non-Hookean behavior of solids	100
2.8.1.3 Non-linear creep	100
2.8.1.4 Non-linear relaxation	102
2.8.1.5 Non-linear periodic measurements	105
2.8.2 Linear – non-linear correlations	109
2.8.3 Rheological equations of state for non-linear viscoelastic behavior	110
2.8.3.1 The K-BKZ model	112
2.8.3.2 The Wagner models	112
2.8.3.2 The Leonov model	114
2.8.3.4 The Marrucci models	116
2.8.4 Comments – constructing non-linear constitutive equations and experiment	116
<i>References</i>	119
<i>Questions for Chapter 2</i>	124

## **3 LIQUIDS** 127

3.1 Newtonian and non-Newtonian liquids. Definitions	127
3.2 Non-Newtonian shear flow	131
3.2.1 Non-Newtonian behavior of viscoelastic polymeric materials	131
3.2.2 Non-Newtonian behavior of structured systems – plasticity of liquids	133
3.2.3 Viscosity of anisotropic liquids	138
3.3 Equations for viscosity and flow curves	141
3.3.1 Introduction – the meaning of viscosity measurement	141
3.3.2 Power-law equations	142
3.3.3 Equations with yield stress	143
3.3.4 Basic dependencies of viscosity	146
3.3.4.1 Viscosity of polymer melts	146
3.3.4.2 Viscosity of polymer solutions	147
3.3.4.3 Viscosity of suspensions and emulsions	152
3.3.5 Effect of molecular weight distribution on non-Newtonian flow	154
3.4 Elasticity in shear flows	156
3.4.1 Rubbery shear deformations – elastic recoil	156
3.4.2 Normal stresses in shear flow	159
3.4.2.1 The Weissenberg effect	159
3.4.2.2 First normal stress difference – quantitative approach	160
3.4.2.3 Second normal stress difference	162
3.4.3 Normal stresses and elasticity	162
3.4.4 Die swell	165
3.5 Structure rearrangements induced by shear flow	166
3.5.1 Transient deformation regimes	166
3.5.2 Thixotropy and rheopexy	169
3.5.3 Shear induced phase transitions	175
3.6 Limits of shear flow – instabilities	180
3.6.1 Inertial turbulency	180
3.6.2 The Toms effect	181

3.6.3	Instabilities in flow of elastic liquids	183
3.6.3.1	Dynamic structure formation and secondary flows in elastic fluids	183
3.6.3.2	Secondary flows in the flow of elastic fluids	184
3.6.3.3	Shear banding	195
3.7	Extensional flow	196
3.7.1	Model experiments – uniaxial flow	196
3.7.2	Model experiments – rupture	199
3.7.3	Extension of industrial polymers	203
3.7.3.1	Multiaxial elongation	204
3.7.4	The tubeless siphon effect	205
3.7.5	Instabilities in extension	206
3.7.5.1	Phase transitions in extension	206
3.7.5.2	Rayleigh instability	207
3.7.5.3	Instabilities in extension of a viscoelastic thread	208
3.8	Conclusions – real liquid is a complex liquid	209
	<i>References</i>	211
	<i>Questions for Chapter 3</i>	219

## **4 SOLIDS 223**

4.1	Introduction and definitions	223
4.2	Linear elastic (Hookean) materials	224
4.3	Linear anisotropic solids	229
4.4	Large deformations in solids and non-linearity	231
4.4.1	A single-constant model	231
4.4.2	Multi-constant models	236
4.4.2.1	Two-constant potential function	236
4.4.2.2	Multi-member series	238
4.4.2.3	General presentation	240
4.4.2.4	Elastic potential of the power-law type	241
4.4.3	The Poynting effect	242
4.5	Limits of elasticity	243
4.5.1	Standard experiment – main definitions	243
4.5.2	Plasticity	244
4.5.3	Criteria of plasticity and failure	245
4.5.3.1	Maximum shear stress	245
4.5.3.2	The intensity of shear stresses (“energetic” criterion)	246
4.5.3.3	Maximum normal stress	247
4.5.3.4	Maximum deformation	247
4.5.3.5	Complex criteria	247
4.5.4	Structure effects	249
4.5.4.1	Strengthening	250
4.5.4.2	Thixotropy	251
	<i>References</i>	251
	<i>Questions for Chapter 4</i>	252

<b>5</b>	<b>RHEOMETRY. EXPERIMENTAL METHODS</b>	<b>255</b>
5.1	Introduction – Classification of experimental methods	255
5.2	Capillary viscometry	257
5.2.1	Basic theory	257
5.2.2	Corrections	263
5.2.2.1	Kinetic correction	263
5.2.2.2	Entrance correction	264
5.2.2.3	Pressure losses in a reservoir of viscometer	266
5.2.2.4	Temperature correction	266
5.2.2.5	Pressure correction	267
5.2.2.6	Correction for slip at a wall	268
5.2.2.7	Adsorption on a channel surface	269
5.2.3	Flow in incompletely filled capillary	269
5.2.3.1	Motion under action of gravitation forces	269
5.2.3.2	Motion caused by surface tension forces	270
5.2.4	Limits of capillary viscometry	270
5.2.5	Non-viscometric measurements using capillary viscometers	271
5.2.6	Capillary viscometers	272
5.2.6.1	Classification of the basic types of instruments	272
5.2.6.2	Viscometers with the assigned load	273
5.2.6.3	Cup viscometers	275
5.2.6.4	Glass viscometers	276
5.2.7	Viscometers with controlled flow rate	277
5.2.7.1	Instruments with a power drive	278
5.2.7.2	Instruments with hydraulic drive	279
5.2.7.3	Extrusion rheometers	279
5.2.7.4	Technological capillary tube viscometers	279
5.3	Rotational rheometry	280
5.3.1	Tasks and capabilities of the method	280
5.3.1.1	Viscometric and non-viscometric measurements	280
5.3.1.2	The method of a constant frequency of rotation	280
5.3.1.3	The method of a constant torque	282
5.3.2	Basic theory of rotational instruments	282
5.3.2.1	Instruments with coaxial cylinders	282
5.3.2.2	Instruments with conical surfaces	286
5.3.2.3	Bi-conical viscometers	287
5.3.2.4	Disk viscometers	288
5.3.2.5	Viscometers with spherical surfaces	290
5.3.2.6	End (bottom) corrections in instruments with coaxial cylinders	290
5.3.2.7	On a role of rigidity of dynamometer	291
5.3.2.8	Temperature effects	292
5.3.3	Limitations of rotational viscometry	292
5.3.4	Rotational instruments	294
5.3.4.1	Introduction – general considerations	294
5.3.4.2	Rheogoniometers and elastoviscometers	295

5.3.4.3	Viscometers with assigned rotational speed	297
5.3.4.4	Rotational viscometers for special purposes	299
5.3.4.5	Rotational instruments for technological purposes	301
5.3.5	Measuring normal stresses	303
5.3.5.1	Cone-and-plate technique	303
5.3.5.2	Plate-and-plate technique	305
5.3.5.3	Coaxial cylinders technique	305
5.3.5.4	Hole-pressure effect	306
5.4	Plastometers	307
5.4.1	Shear flow plastometers	307
5.4.2	Squeezing flow plastometers	308
5.4.3	Method of telescopic shear	310
5.4.3.1	Telescopic shear penetrometer	311
5.5	Method of falling sphere	313
5.5.1	Principles	313
5.5.1.1	Corrections	314
5.5.2	Method of rolling sphere	316
5.5.3	Viscometers with falling sphere	317
5.5.4	Viscometers with falling cylinder	318
5.6	Extension	319
5.6.1	General considerations	319
5.6.2	Experimental methods	320
5.6.2.1	The simplest measuring schemes	320
5.6.2.2	Tension in a controlled regime	321
5.6.2.3	Tubeless siphon instruments	322
5.6.2.4	Flow in convergent channels	322
5.6.2.5	High strain rate methods	323
5.6.2.6	Capillary breaking elongational rheometry	323
5.6.3	Biaxial extension	324
5.7	Measurement of viscoelastic properties by dynamic (oscillation) methods	325
5.7.1	Principles of measurement – homogeneous deformation	325
5.7.2	Inhomogeneous deformations	327
5.7.3	Torsion oscillations	329
5.7.4	Measuring the impedance of a system	331
5.7.5	Resonance oscillations	332
5.7.6	Damping (free) oscillations	333
5.7.7	Wave propagation	336
5.7.7.1	Shear waves	336
5.7.7.2	Longitudinal waves	337
5.7.8	Vibration viscometry	338
5.7.8.1	Torsion oscillations	341
5.7.8.2	Oscillation of a disk in liquid	341
5.7.8.3	Oscillations of sphere	342
5.7.8.4	Damping oscillations	342

5.7.9	Measuring viscoelastic properties in non-symmetrical flows	343
5.7.10	About experimental techniques	344
5.7.10.1	Rotational instruments	344
5.7.10.2	Devices with electromagnetic excitation	344
5.7.10.3	Torsion pendulums	346
5.8	Physical methods	347
5.8.1	Rheo-optical methods	347
5.8.1.1	Basic remarks	347
5.8.1.2	Stress – optical rules for polymer melts	349
5.8.1.3	Stress-optical rule for polymer solutions	353
5.8.1.4	Viscometers for optical observations	354
5.8.1.5	Polarization methods for measuring stresses	356
5.8.1.6	Visualization of polymer flow in dies	357
5.8.2	Velocimetry	357
5.8.3	Viscometers-calorimeters	358
	<i>References</i>	359
	<i>Questions for Chapter 5</i>	363

## **6 APPLICATIONS OF RHEOLOGY**

6.1	Introduction	365
6.2	Rheological properties of real materials and their characterization	366
6.2.1	Polymer materials	366
6.2.2	Mineral oils and oil-based products	371
6.2.3	Food products	374
6.2.4	Cosmetics and pharmaceuticals	376
6.2.5	Biological fluids	377
6.2.6	Concentrated suspensions	379
6.2.7	Electro- and magneto-rheological materials	381
6.2.8	Concluding remarks	383
6.3	Rheokinetics (chemorheology) and rheokinetic liquids	384
6.3.1.	Formulation of problem	384
6.3.2.	Linear polymerization	385
6.3.3	Oligomer curing	388
6.3.3.1	Viscosity change and a gel-point	388
6.3.3.2	Curing at high shear rates	390
6.3.3.3	Curing after gel-point	392
6.3.4	Intermolecular transformations	395
6.3.4.1	Polymeric reaction	395
6.3.4.2	Physical transformations	396
6.4	Solution of dynamic problems	396
6.4.1	General formulation	396
6.4.2	Flow through tubes	399
6.4.3	Flow in technological equipment	403
6.4.3.1	Pumping screw	403
6.4.3.2	Calendering and related processes	406

6.4.3.3 Extension-based technologies	408
6.4.3.4 Molding technologies	410
6.4.3.5 Compression molding	411
6.4.3.6 Injection molding	413
6.4.3.7 Injection-compression molding	416
<i>References</i>	417
